

FMUSER IPTV System Software

Overview:

FMUSER IPTV system is an advanced TV system based on CAT5 transmission. This system uses IP protocol to transmit TV programs, allowing users to watch TV content through network cables with higher flexibility and customizability.

1. High-definition and smooth viewing experience

With the help of IP protocol transmission method, FMUSER IPTV system can provide high-definition and smooth viewing experience. Users can enjoy clear, stutter-free picture quality, bringing more realistic visual effects and enhancing the fun of watching TV.

2. Flexible customization and management

The system is flexible and customizable. Users can add or delete programs according to their needs, create their own playlists, and achieve a personalized TV viewing experience. At the same time, the system also provides powerful management functions, and administrators can manage and monitor TV channels and programs.

3. Powerful scalability

FMUSER IPTV system has strong scalability and can expand more TV channels and content as needed. This enables the system to adapt to changing needs and market trends, keeping content diverse and updated.

License authorization:

FMUSER IPTV adopts the local permanent authorization method, purchase once and use it for life.

It is allowed to update the authorization method twice due to hardware reasons.
